ONLINE ACTIVITY #2
Personalized Linux, and Git Cheat Sheet

Using any available resources (official Git documentation, online tutorials, or the built-in git --help command), research the following topics and create a personalized 1-page (A4) cheat sheet:

1. Basic Linux commands (command, sample usage) (at least 10)
2. Basic Git commands (command, sample usage, description (use your own wordings), common options/flags

git init	git restore
git status	git branch
git add	git checkout / git switch
git commit	git merge
git log	git tag
git diff	git clone

3. the three-tree architecture of Git

You are free to use any design or color scheme, just make sure it is readable.

Submission:

1. Use PDF as the file format for your cheat sheet.
2. Upload it to your GitHub repository
3. Submit the link here: <https://drive.google.com/drive/folders/1-Y6e6E6PoLyGgB0WZ8prRCNfolpV3cj0?usp=sharing>

Reminders:

Please put a "Reference" section in the cheat sheet for the materials you cited.

I DO NOT PROHIBIT the use of AI for this activity, but please declare the extent of the use.

Sample:

"The author used [Tool Name, Version] to [specific task] during assignment preparation. The author reviewed and edited the content as needed and takes full responsibility for the final content of the work."

Or

"I have not used any AI or AI-assisted technologies to prepare this work."

1. Linux Commands

Command	Sample usage	Description
ls	ls	Shows files and folders
pwd	pwd	Shows your current directory
cd	cd Documents	Moves to another directory
locate	locate report.txt	Search files by name
find	find . -name "example.txt"	Search files and directories
mkdir	mkdir project	Create a directory
rmdir	Rmdir dir1	Remove an empty directory
rm	rm file.txt	Deletes a file or directories
cp	cp file.txt backup.txt	Copy files or directories
mv	mv old.txt new.txt	Moves or renames a file
touch	touch index.html	Creates an empty file
cat	cat file.txt	Displays file contents
clear	clear	Clears the terminal screen

2. Git Commands

Command	Sample usage	Description
git init	git init [repository name]	Starts a new repository
git status	git status	Lists all the files that have to be committed.
git add	git add [file]	Adds a file to the staging area.
git commit	git commit -m "[Type in the commit message]"	Saves the staged changes into Git's history.
git log	git log	List the version history for the current branch.
git diff	git diff	Shows the file differences which are not yet staged
git restore	git restore [file]	Restores files and can remove changes that haven't been committed.
git branch	git branch [branch name]	Lists all the local branches in the current repository or create new branch
git checkout / git switch	git checkout [branch name]	Switch from one branch to another.
git merge	git merge [branch name]	Merges the specified branch's history into the current branch.
git tag	git tag	Gives a name/label to a specific commit, commonly used for versions.
git clone	git clone https://github.com/user/project.git	Downloads/copies an existing Git repository to your computer.
git pull	git pull [Repository Link]	Fetches and merges changes on the remote server to your working directory.

3. Three-Tree Architecture

Working Directory – Contains the actual files in their current state, representing the working copy where developers make edits.

Staging Area – A temporary storage space that holds changes prepares for the next commit.

Repository – Stores the committed history of the project.
